You have options
Decrease the work of breathing and provide constant nCPAP with mask or prongs

Infant Flow® SiPAP low pressure (LP) system features
- A dual-jet generator that incorporates fluidic flip technology to help decrease the infant’s work of breathing (WOB)
- Faster response to achieving the BiPhasic level
- Deliver nCPAP at a consistent pressure
- Features a mask option that may reduce nCPAP failure and bronchopulmonary dysplasia (BPD) rates

CareFusion helps you optimize your SiPAPs
- We offer a variety of educational aids including PowerPoint presentations, webinars, quick reference materials and the CareFusion Learning Portal (LP) for SiPAP.
- The LP consumables are now available. We offer heated-wire circuits, LP generators, XS–XL mask/prongs, as well as bonnets and headgear for securing the generator. Learn why the LP interface is the right choice for your patient.
