

## Pyxis CUBIE® system

The Pyxis CUBIE® system from CareFusion helps improve patient safety and reduce medication errors by securing the medication distribution process. The combination includes the Pyxis CUBIE® pockets and drawers and the optional Pyxis CUBIE® Replenishment system, which allows Pyxis CUBIE® pockets to be filled and checked at the pharmacy.

**The Pyxis CUBIE® pocket** is a secure container that holds medications. Please contact your local sales representative to order a demo Pyxis CUBIE® pocket.

**The Pyxis CUBIE® drawer** is designed to maximize space for increased storage capacity for unique or frequently used medications.

### Key Features

- Pyxis CUBIE® pockets and drawers are compatible with the Pyxis® MedStation® system, Pyxis® SpecialtyStation™ system and Pyxis STARTERx® units
- Embedded pocket memory chip can be programmed with load-specific data
- Efficient medication expiration date tracking
- Design of drawers maximizes space and the possible number of unique medications stored at a unit
- Pockets can easily be moved around in the drawer or exchanged for different pocket sizes to accommodate ever-changing formularies

### Pyxis CUBIE® Replenishment system

The Pyxis CUBIE® Replenishment system improves pharmacy workflow by providing the capability to fill Pyxis CUBIE® pockets and program them with the medication data within the pharmacy. The programmed pockets are then securely delivered to the station, where they communicate the new medications to the system.
