

Pyxis® Control Center

Pyxis systems management. Integrated.

Overview

The Pyxis Control Center helps break down the physical barriers associated with systems management, enabling your Pharmacy and Materials Management staff to manage their Pyxis MedStation™ and Pyxis SupplyStation® systems from anywhere in the hospital or health system network. By virtualizing the software for these systems, this integrated approach allows you to leverage your technology investment and improve workflow efficiency.

From simplifying standard requests—including password resets, formulary and item master changes—to improving user management with an integrated user database, Pyxis Control Center saves time and increases staff efficiency.

Pyxis®

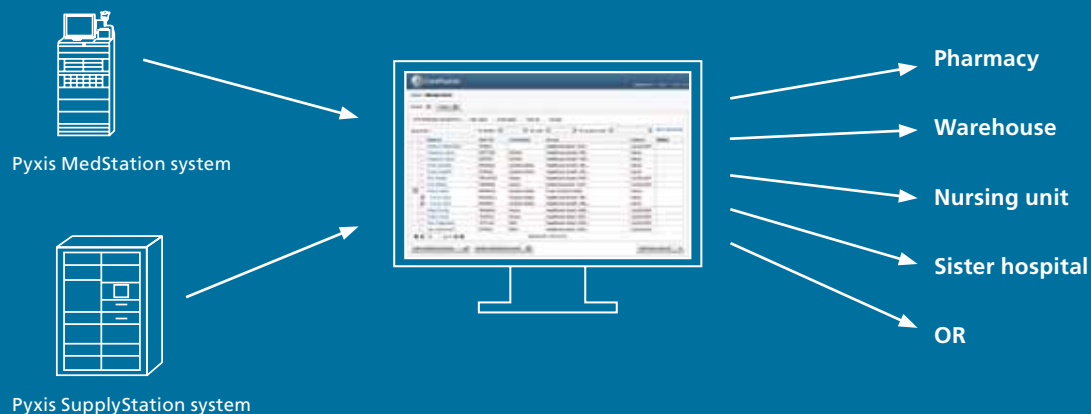

Access. Anywhere.

The Pyxis Control Center virtualizes Pyxis MedStation and Pyxis SupplyStation system software, so you can access both systems from a single interface anywhere in the hospital or health system network. With information at your fingertips, daily management activities are quick and easy, including:

- Modifying formulary and item master configurations
- Managing user account requests and attention notices

Systems management from anywhere in the hospital or health system—with a single interface

Simplified user management.

The Pyxis Control Center not only integrates user management between the Pyxis technologies throughout your hospital, it also extends across a health system. By improving your staff's ability to easily meet changing user management needs and support compliance with regulatory requirements, satisfaction increases while risk—including diversion—decreases.

Common user management needs

- Onboarding
- Temporary user management
- Float-pool staff
- Terminated users

Maximum productivity with a high availability server.

The Pyxis Control Center consists of hardware and software components, including a scalable, high-availability server. Support includes software for antivirus updates and operating system patches, as well as remote monitoring by the CareFusion Technical Support Center.
