

# Streamlining medication and supply management

Pyxis® DuoStation system

# Pyxis® DuoStation system

Automating medication and supply management

The Pyxis® DuoStation system from CareFusion combines the benefits of medication and supply automation. This space-saving and cost efficient system enables facilities of all sizes to harness the power of the Pyxis® MedStation® system and the Pyxis SupplyStation® system within a single unit.

The Pyxis® DuoStation system provides a scalable approach for non-automated hospitals, while offering larger acute care facilities the opportunity to employ a single point of access for medication and supply dispensing. The enhanced flexibility of the Pyxis® DuoStation system provides a solution that supports specialty care and procedural areas within acute care facilities, community hospitals, surgical centers and outpatient clinics.

## Benefits

- Single point for dispensing both medications and supplies
- Enhanced workflow reduces trips to multiple stations, creating efficiencies in patient care
- Flexible configuration for securely managing medications and supplies
- Helps improve security and tracking of controlled substances
- Provides cost savings opportunities through inventory reduction and increased charge capture
- Helps facilitate compliance with Joint Commission standards
- Provides a scalable approach for growing facilities
- Integrates seamlessly with other Pyxis® medication and supply technologies

Track and securely store all controlled substances and medications. Featured: Pyxis CUBIE® drawer.

Ensures availability of supplies and increases charge capture. Featured: Pyxis® touch-to-take technology.
