

Optimize workflow with open access technologies

Pyxis® Perioperative Solutions

From remote locations to virtually any area of your healthcare facility, open access Pyxis supply technologies provide a flexible and scalable platform that helps you improve item availability, workflow, financial performance and patient care.

Automating manual processes is essential to improving staff satisfaction and keeping costs contained. By using proven barcode or Pyxis Touch-to-Take technology, our open access technologies automate processes and integrate usage information in a single database to help improve inventory accuracy, availability and refill efficiency.

With open access Pyxis supply technologies, you can help:

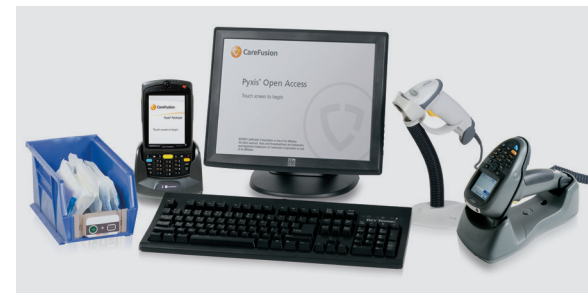

- Reduce manual processes
- Track supply usage, and automate reordering
- Improve the availability of supplies, and reduce stock-outs
- Standardize inventory, and reduce supply spend
- Improve charge capture and billing accuracy
- Leverage existing hospital storage solutions
- Provide a measurable and continuous return on investment
- Turn supply usage reporting into actionable intelligence

Pyxis®

Customizable, flexible solutions

Open access Pyxis supply technologies include the Pyxis JITrBUD system, Pyxis StockStation™ system and Pyxis ParAssist system. With the flexibility to integrate with a wide array of Pyxis supply technologies, our open access technologies automatically track, control and document supply usage wherever supplies are stored. Optional desktop, wall-mounted and Ergotron mobile cart configurations allow you to further customize your CareFusion investment.

Pyxis ParAssist system

The Pyxis ParAssist handheld system brings supply automation into ancillary par locations. The system reduces the number of manual processes required for cycle counting, reordering and refilling. This automated system uses a handheld barcode scanner to count, replenish and reorder stock—helping increase inventory accuracy and management of par levels.

Pyxis StockStation system

The Pyxis StockStation handheld system automates supply distribution, charge capture and reordering processes with proven barcode technology. The point-of-use system is ideal for managing inventory throughout your facility, and features a wireless or wired scanner and intuitive touch-screen interface with an on-screen keyboard.

Pyxis JITrBUD system

The Pyxis JITrBUD system (*Just-In-Time remote Business Utilization Device*) is a battery-powered, wireless device that attaches directly to existing storage systems. It features Pyxis Touch-to-Take technology and can be placed wherever you need point-of-use supply automation. Scanning capabilities can be added with an optional wireless or wired scanner.

Customizable hybrid solutions

Pyxis supply technologies offer hospitals a hybrid approach to the ongoing challenge of supply management. The Pyxis JITrBUD system and scanning devices can be used as stand-alone systems or to complement the Pyxis SupplyStation® system and Pyxis ProcedureStation® system—giving you the flexibility to blend open and secure supply management solutions. This hybrid configuration allows you to leverage your entire Pyxis supply technologies investment to meet your facility's unique needs.
