

BD appreciates your continued support and are pleased to provide an update on supply availability. BD's customer care and supply chain relations teams continue to be available to support customer needs and we will continue to provide regular updates.

Inventory Status

The below tables provide a product inventory view at the Product Set level. We expect to be at positive inventory levels in BD Distribution Centers by the last day of the month indicated in the Expected U.S. Channel Recovery column. On that date the item will move to normal "In Stock" status but may remain on manual allocation to ensure we maintain fair and balanced supply to customers for items with accelerated demand.

- The status "In Stock" indicates those Product Sets that currently have healthy inventory levels and a steady production plan that will accommodate projected demand forecast throughout 2024.
- Those Product Sets identified as "Rolling Supply Constraint" indicate items where BD will continue to experience less than full fill rates on orders. There is no disruption in BD's ability to manufacture these products. We continue to produce and ship product every day to our distributors to service customers.
- Those Product Sets identified as "Backorder" indicate these items are a result of manufacturing shifts to maximize output of essential items. These items will be significantly limited until the last day of the month as indicated in the chart below. Customers are encouraged to utilize alternate SKUs for those listed as "Backorder."
- Those Product Sets identified as "Manual Allocation" indicate essential items that are in heightened demand. The unique situation for BD Hypodermic products requires a specific Manual Allocation process that enhances our ability to minimize disruption. This allocation process allows us to optimize the supply of these items across our entire customer base. Product may remain on allocation even if status is "In Stock" to protect inventory.

This process is intended to mitigate surge orders and ensure fair share of inventory to all customers. Currently, as inventory arrives into the BD Distribution Center from the manufacturing plant, it is immediately allocated to open orders to be scheduled for shipment.
